

RANDOLPH-MACON  
COLLEGE

## Green Is the New Blue – Environmental Majors Randolph-Macon College

### **Environmental Studies (B.S. / B.A.)**

Randolph-Macon College prepares students to meet and solve challenging environmental problems of the 21st Century. Using a multi-disciplinary approach, students explore, analyze, and solve real environmental problems - for real clients - that involve the complex interactions of humans with the biosphere, lithosphere, hydrosphere, and atmosphere.

Students of environmental studies must become:

- adept at identifying the issues that comprise a complex problem
- skillful in gathering the information necessary to understand it
- creative in developing holistic solutions, and productive in interdisciplinary teams.
