

# Green Is the New Blue – Environmental Majors

## Converse College

### **Environmental Studies Minor**

Environmental Studies is the science of the interaction between humans and the environment. An interdisciplinary field, environmental studies involves interconnections between ecology, economics, geography, geology, meteorology, politics and sociology. As an environmental studies student, you will explore the structure and function of the world and our connection to it.

Environmental Studies is an interdisciplinary field and the courses taught at Converse reflect its diversity. Through the Environmental Studies minor, you will learn information and take courses that span biology, chemistry, economics, politics and sociology. As an environmental studies student, you will learn how the choices you make affect your own health and that of the environment around you.

Additionally, our coursework will provide you practical experience through an internship or research program. The Environmental Studies minor complements any major at Converse, from Economics, to Biology, to Creative Writing. Knowledge and perspective about issues and concepts of our natural world will be helpful to you in the career of your choice!
